

Stagger Script

Installation and Use

STEP 1 | Install the Script

Place the stagger folder in the following directory:

Windows: C:\Users\\Documents\maya\version_number\scripts

Mac: /Users/<username>/Library/Preferences/Autodesk/maya/<version_number>/scripts/

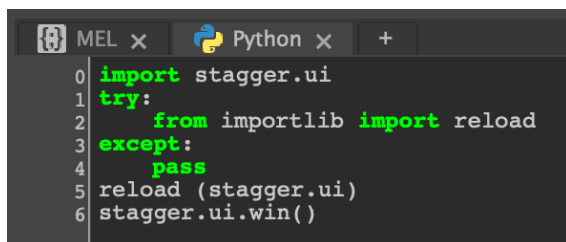

STEP 2 | Create the Shelf Button

Open the **Script Editor** by clicking on the bottom right corner icon in Maya

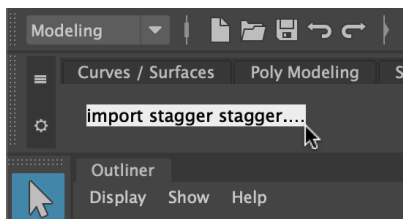

In the lower portion of the **Script Editor**, copy/paste the following in the **Python** tab. Make sure it's formatted exactly like the example below as the indents matter.

```
import stagger.ui
try:
    from importlib import reload
except:
    pass
reload (stagger.ui)
stagger.ui.win()
```

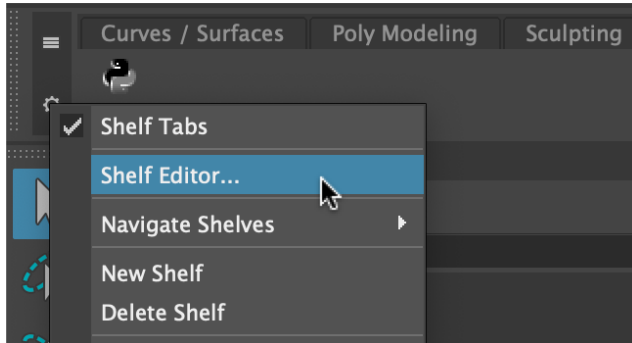

Select the code and Left-Mouse-Button drag the script to your shelf. When prompted to “Save script to shelf as type:”, choose **Python**

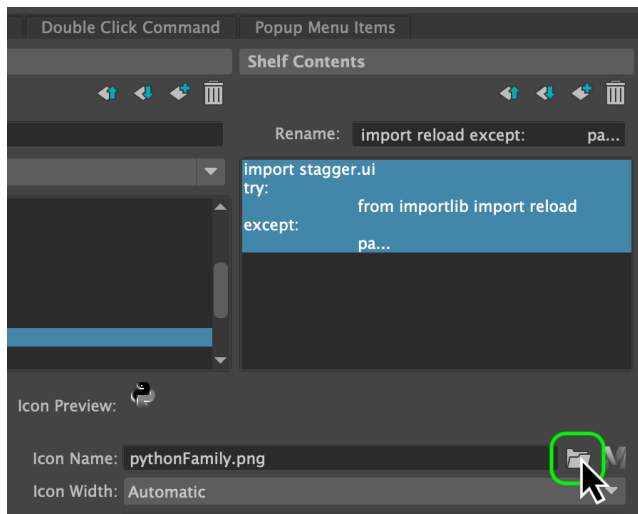

STEP 3 | Use the included icon (optional)

Click the little gear to the left of your shelf and open the **Shelf Editor**

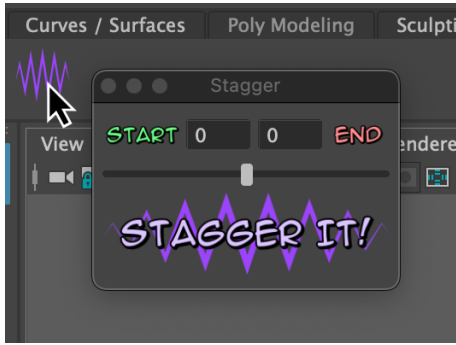

With the script highlighted in the right-most panel, click on the folder icon just below.

Navigate to the stagger folder (step 1) and inside the images folder, click on the “stagger_icon.svg” file and click **Open**

You'll be returned to the Shelf Editor. Click **Save All Shelves** and you're ready to use Stagger by clicking on the shelf button.

STEP 4 | Run the script

1. Click on the shelf button to bring up the **Stagger** window.
2. Select the character controls that you want to stagger. The script modifies existing animation so you must have animation on the character for the script to work.
3. Type in the start frame or go to that frame in the Time Slider and click on the **Start** button.
4. Enter the end frame or go to that frame in the Time Slider and click on the **End** button.
5. Use the slider to determine the strength of the stagger.
6. Click **Stagger It!**
